SAE HYDRAULIC 4 BOLT AND SPLIT FLANGED FITTINGS

# Ordering System

Our basic part numbering system is easy to use. The explanation of our part numbering system is detailed below. The series number provides the greatest amount of information pertaining to the flange product. The port size and pad size simply refer to size only, with all sizes based on 1/16 of an inch.

**NOTE #1** - All items available with mounting kit by simply adding suffix letter “U” to the W series and the letter “O” to our split flange series. Example: W4-20-24U & 16SFXO would include all appropriate hardware.

**NOTE #2** - All items available in stainless steel material by simply adding the suffix letters “SS”. Stainless steel flanges may vary in shape and/or design from carbon steel flanges. Please consult factory for dimensions.

Only pressurize center port (port #2). Side ports (ports #1 and #3) should not be pressurized or be exposed to back pressure that is greater than the inlet pressure. Failure to follow these guidelines will result in internal leakage through the valve. For applications requiring pressure applied to side ports, please refer to AE3K Series valves.

Only pressurize center port (port #2). Side ports (ports #1 and #3) should not be pressurized or be exposed to back pressure that is greater than the inlet pressure. Failure to follow these guidelines will result in internal leakage through the valve.  
For applications requiring pressure applied to side ports, please refer to AE3K Series valves.

## FLANGES

Our basic part numbering system is simple to use. The explanation of our part numbering system is detailed below. The series number provides the greatest amount of information pertaining to the flange product. The port size and pad size simply refer to size only, with all sizes based on 1/16 of an inch.

NOTE #1 – All items available with mounting kit by simply adding suffix letter “U”.

NOTE #2 – All items available in stainless steel material by simply adding the suffix letters “SS”.

NOTE #3 – All items available with metric mounting holes simply by adding the appropriate suffix (IE: M10, M12, etc.).

# General Information

## SPLIT FLANGE CLAMP

Clean the sealing surfaces and make certain they are free from nicks, scratches and burrs. Foreign material prevents a proper seal.

Lubricate the o-ring and ensure that it is properly installed as to prevent damage during installation.

Push the flange clamps towards the flange head and screw fasteners into flange pad. Continue to screw the fasteners until their heads just meet the split flange surface.

Torque the fasteners in diagonal sequence, in small increments, until final torque level is achieved. Torque values for flange connections listed above. Notice that the torque values vary according to size and fastener type.

Anchor Fluid Power split flange connections are manufactured according to SAE J518-1 and -2, as well as ISO 6162-1 and -2. These standards control dimensions, tolerances and plating. Please note that the above pressure rating chart refers to the flange connection. Adapting the flange to other connections, such as braze tube, welded pipe, or threaded ports / stud ends, could reduce maximum working pressure.

Please consult with Anchor Fluid Power for pressure rating specific to your connection requirement.
